

PW Grid Keyboard Usage

PartsWatch as of R60.1

Key	Read-Only Grid	Grid With Editable Cells
Enter	No functionality.	Once the cell is selected (cannot select using 'Enter'), the 'Enter' key moves the active cell from one cell to the right within editable cells and selects the cell contents (to allow for editing) until the last editable cell is reached and then moves to the next row's first editable cell. When the last editable cell in the grid is reached the 'Enter' key does nothing (i.e. remains on last cell). ('Shift'+ 'Enter' does the same thing in reverse).
Tab	Moves the active cell one cell to the right until the last column is reached and then moves to the first cell of the next row. When it reaches the last cell of the grid it moves focus to other elements on the screen (buttons/checkboxes).	Same as the 'Enter' key but the cell contents in focus is not highlighted; type a value to replace the existing value without having to highlight with the mouse. However, once the 'Enter' key is used and then the 'Tab' key is used, the 'Tab' key WILL highlight the cell contents; when it gets to the last editable cell on the grid, it stops.
Shift+Tab	Moves the active cell one cell to the left until the first column is reached and then moves to the last cell of the previous row. When it reaches the first cell in the grid, it moves focus to other elements on the screen (buttons/checkboxes).	Same as 'Tab' but in reverse.
Right Arrow	Same as 'Tab' except it stops at the last cell in the grid.	Same as 'Tab'.
Left Arrow	Same as 'Shift'+ 'Tab' except it stops at the first cell in the grid.	Same as 'Tab' but in reverse.
Up Arrow	Moves the active cell up one row and highlights the prior row; stops when the first row is reached.	Moves the active editable cell up one row and highlights the prior row; stops when the first row is reached.

PW Grid Keyboard Usage

PartsWatch as of R60.1

Down Arrow	Moves the active cell down one row and highlights the prior row; stops when the last row is reached.	Moves the active editable cell down one row and highlights the prior row; stops when the last row is reached.
Home	Moves the active cell to the first column of the current row.	Moves the active cell to the first editable column of the current row.
End	Moves the active cell to the last column of the current row.	Moves the active cell to the last editable column of the current row.
Ctrl+Home	Moves active cell to first column, first row.	Moves active cell to first editable column, first row.
Ctrl+End	Moves active cell to last column, last row.	Moves active cell to last editable column, last row.
