# 1. DOCUMENT INFORMATION

# 1.1. Publication Record

Upon approval of this document, Revision 1.0 is the current version of the 57.3 PW Integration with Federated Link Catalog Setup Guide.

| Rev. | Publication Date | Author Name | Description of Revisions |
|------|------------------|-------------|--------------------------|
| 1.0  | 06/07/18         | Zach Evens  | Initial Publication      |

The graphics illustrated in this document represent the proposed design. Modifications made during development may alter the final design without changing intended functionality.

Numbers, currency, dates, and times in this document are written in English (United States) format; however, the application supports other languages and formats for numbers, times, and dates.

# 2. PURPOSE

This document provides instructions to integrate the Federated Link Catalog with the PartsWatch application.

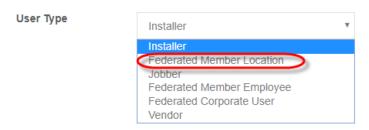

Federated Link, similar to Nexpart, is an ecommerce website that allows catalog lookups and placing of orders. The user will be able to place an order using the Federated Link website and that order will be sent to a store as a sales order.

# 3. PartsWatch Integration with FedLink Catalog

- 1. The user will need a Member ID, set up by the Federated Link team. This is a site ID that identifies the PartsWatch database that will be placing the orders.
- 2. Add this Member ID to a table in PartsWatch so that sales orders can be sent from the website to PartsWatch.
- 3. The Federated Link team will also set up the first User Name and Password that will be used to log in from the Federated Link website. This first user, given the proper permissions, sets up the store's customers as users.
- 4. Set the store user up as a User Type of "Federated Member Location":

Note: Can also be setup by Federated.

5. The FEDERATED LINK CATALOG USERNAME and FEDERATED LINK CATALOG PASSWORD fields are on the INVOICE OPTIONS screen, CATALOG tab. Once a store's user has been set up on the Federated website as a "Federated Member Location", also set up that user name and password in PartsWatch.

Menu Path: Controls, Store, Invoice Options, INVOICE OPTIONS screen, CATALOG tab

- 6. Log in using the user name and password set up in the INVOICE OPTIONS screen, CATALOG tab and set up an account for each customer desiring to place orders on the website.
  - For each user, the PartsWatch account number under which the customer's sales orders are
    created on PartsWatch will be specified in the Federated setup. This account number is sent in
    the order request.
  - Set up the store's customers as "Installer" or "Jobber":

User Type

7. Once setups are complete, access the Federated Link website (<a href="www.federatedlink.com">www.federatedlink.com</a>) and log in with your user name and password.

8. Accessing the Federated Link Catalog web page through PartsWatch, the user can select the lines they want in the catalog by clicking the menu icon in the top right corner of the web page.

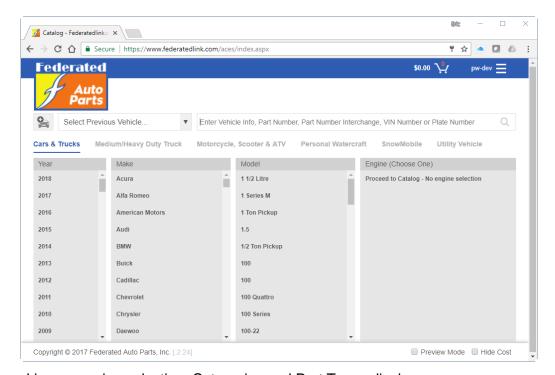

9. **Note:** This feature on the Federated Link Catalog web page only allows the user to select lines, the user cannot map the catalog lines to the store's lines on their web page. This mapping is done by

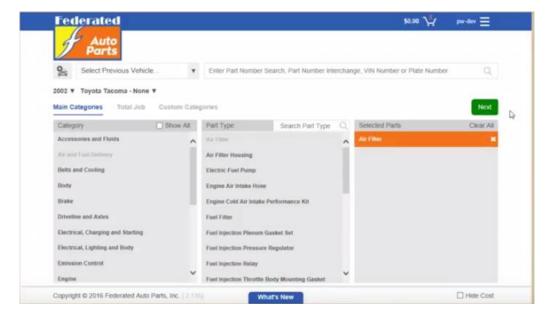

57.3 PWS PartsWatch

- clicking the FEDERATED LINK LINE MAPPING button in the SYSTEM GENERAL SETUP screen, accessed from Controls, System, General Setup.
- 10. Upon logging in the user looks up a vehicle using various methods such as Previous Vehicle, freeform Google-like search, VIN or plate number, or by specifying Year, Make, Model and Engine. A part number can also be entered in the free-form area to do an interchange lookup.

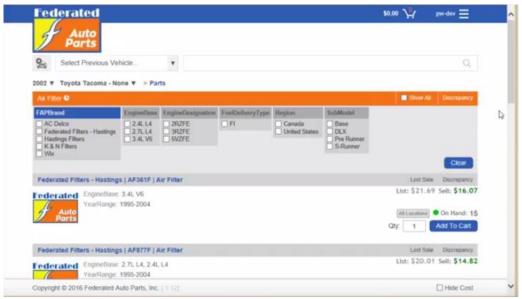

11. Upon making an engine selection, Categories and Part Types displays:

57.3 PWS PartsWatch

12. After selecting Categories and Part Types and clicking Next, catalog results display and the user can further filter using checkboxes at the top of the screen, or click Add To Cart to add parts to the cart:

13. Once parts are returned from a lookup, the user can click the Add To Cart button for any part that is available with pricing.

14. This adds to the cart summary at the top of the web page.

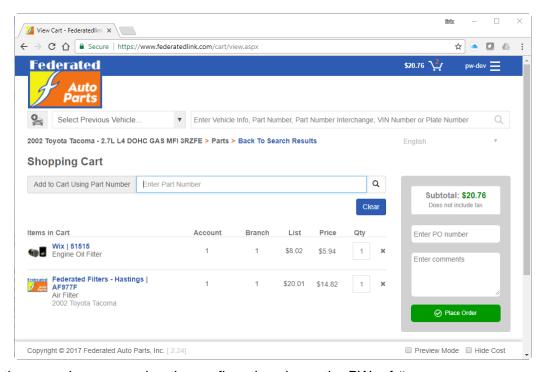

- 15. When the user has parts in the cart, they can click the TRANSFER CARE TO INVOICE button at the top of the CATALOG screen.
- 16. If the Federated Link user is setup to see inventory from multiple PW locations and the user adds items from multiple PW locations to the shopping cart, when the user clicks the place order button, an order will be sent to each location and a separate pick will print in each location.
- 17. After placing the order, the user may click the shopping cart icon at the top of the screen to access the cart preview, and from there either place the order or view the full shopping cart:

#### 57.3 PWS PartsWatch

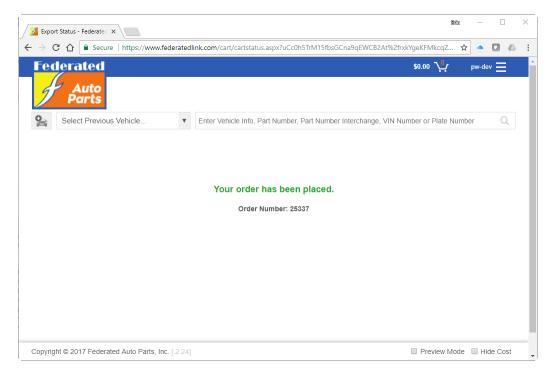

18. Viewing the cart allows the user to enter a PO number and/or comments before placing the order:

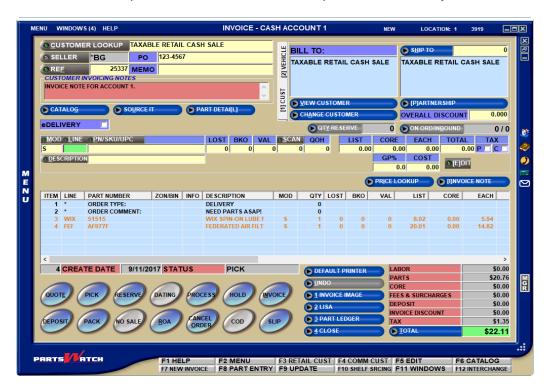

19. When the user places an order, the confirmation shows the PW ref #:

#### 57.3 PWS PartsWatch

20. The order is created as a pick ticket in PartsWatch and prints automatically:

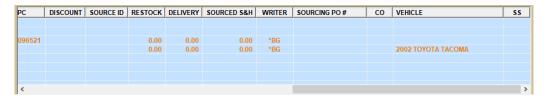

• The PO number from the website displays in the PW PO field.

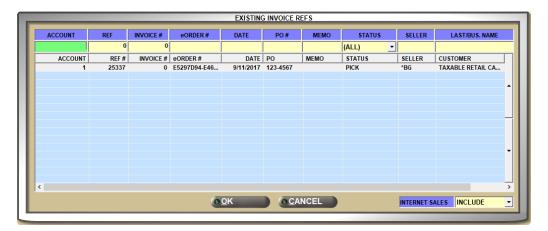

57.3 PWS PartsWatch

- The order type and comments from the website display as line item notes.
- **Note:** Items are shown in orange in the above sample because Scan Validate is enabled and the items have not yet been validated.
- 21. If any of the parts were sold from a vehicle lookup on the website, the vehicle column is populated in the grid.

- 22. The "internet order type" is "FED" in the invoice and journal tables.
- 23. The Federated Link "transaction id" is the "eORDER #" in PW.

24. From the initial FEDERATED LINK screen the user may also enter a number in the free-form field to do a part search, interchange, VIN Search or Plate Search:
